

Saturday Night Shelties (and their Collie Cousins)!

Leigh Anne Clark, Ph.D.

DMS risk assessment, merle genetics, and more

Spend an evening enjoying a delicious dinner and learning what you need to know to breed healthier dogs!

- What is dermatomyositis (DMS)?
- How do you interpret genetic test results to breed DMS-free Collies and Shelties?
- How many merling variations are there, and how are they inherited?
- What's the deal with missing teeth and other dental abnormalities?

Enjoy a New England dinner buffet featuring a variety of salads and entrees, dessert, coffee or tea, and a cash bar. Vegetarian entrees will be available. Relax and chat with friends and fellow exhibitors before enjoying Dr. Clark's talk.

***About our speaker:** Dr. Clark has dedicated her veterinary research career to Sheltie and Collie health. Her 15 years of work on dermatomyositis helped to develop the DMS risk-assessment test. In addition to the latest on DMS, she'll also bring us up to date on merle genetic and the inheritance of dental abnormalities.*

Saturday, November 3, 2018
6:00 pm cash bar
6:30 pm dinner and presentation
Grand Ballroom, Boxboro Regency Hotel
242 Adams Place, Boxborough, MA
